DETAILED ACTION

1. Claims 1-18 are presented for examination; claims 2-10 and 12-14 have been amended; claims 15-18 are newly added claims.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9, 15 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Davies et al. (US 6,839,767).

4. As per claims 1 and 6, Davis teaches the invention as claimed including a method of managing a plurality of user accounts assigned to a computer entity, said method comprising the steps of:

determining an overall predicted future utilization of functionality of said computer entity which will be required to support said plurality of user accounts [104, Fig. 6; col. 11, lines 59-62];

comparing said predicted utilization of functionality with a currently available amount of unused functionality of said computer entity [104, 105, 108, Fig. 6; col. 11, lines 62-67]; and

allowing and disallowing addition of a new user account onto said computer entity depending upon a result of said comparison [steps 64 and 66, Fig. 6; col. 11, line 67 – col. 12, line 6].

5. As per claims 2-4, Davis teaches the step of generating a predicted usage of functionality provided by said computer entity to for each user account over a pre-determined look ahead period by applying a trend prediction algorithm to a historical data describing an actual historical utilization of said functionality by said user account [Fig. 5; col. 11, lines 4-21].

6. As per claim 5, Davis teaches the step of predicting a future utilization of at least one said user account by applying a predetermined percentage rate of increase to a current utilization of said user account [col. 11, lines 4-21 & 32-53].

7. As per claims 7-9, since they are apparatus claims of claims 1-4, they are rejected for the same basis as claims 1-4 above.

9. As per claims 15 and 17, since they are system and computer program claims of claim 1, they are rejected for the same basis as claim 1 above.

Claim Rejections - 35 USC § 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

11. Claims 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis et al. (US 5,848,270) as applied to claims 1-9, 15 and 17 above, in view of Datta et al. (US 6,209,033).

12. As per claims 10 and 11, Davis teaches the invention substantially as claimed in claim 1. Davis does not specifically teach the steps of generating a warning alert message when a predicted utilization of the data storage approaches the available storage capacity and modifying the parameter of the comparison by the administrator. However, Datta on the other hand teaches the steps of generating a warning alert message when a predicted utilization of the data storage approaches the available storage capacity and modifying the parameter of the comparison by the administrator [col. 5, lines 62-67; col. 12, lines 40-51]. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Davis and Datta because doing so would increase the accuracy of the prediction by calculating the results based on various parameters. One of ordinary skill in the art

would have been motivated to modify Davis's system with Datta's warning and modifying step to increase the reliability of the system.

Allowable Subject Matter

13. Claims 12-14, 16 and 18 are allowed.

Conclusion

14. Applicant's arguments with respect to claim 1-18 have been considered but are moot in view of the new ground(s) of rejection.
